

FIRST PRINCIPLES

Access	Cheap, frequent launch — not one heroic flight. Bowen + Southern Launch exist; no Starship MoU yet. Christmas Island already recovered Ship 40 (Jul–Aug 2026).
Stay	Fleets need in-space mobility. Neumann Drive is commercial on SpaceX Transporters; debris→fuel is roadmap, not done.
Build	Print metal structures onshore (Titomic / Lab22). Traction is real aerospace/defence — not a Starship hull line.
Crew	Academy before Hollywood. Western Sydney + ADFA model; holodeck = sim first.

SYSTEMS STACK

07 Academy

W. Sydney + ADFA · sim → flight corridor

06 Medicine

AU medtech / sensing adjacency — not kits

05 Sensors

Fleet constellation · EOS SSA (Atlas = early)

04 Propulsion

Neumann commercial EP · Gilmour access · Hypersonix flown

03 Manufacture

Titomic cold-spray · Lab22 AM — pilots

02 Launch / return

Bowen orbital · Koonibba re-entry · Whalers Way

01 Foundation

TSA 23 Jul 2024 · ITAR · Statement on Space Jul 2026

WHY AUSTRALIA

- TSA in force — US vehicles can launch from AU soil (still needs licences).
- Ship 40 recovery already used AU logistics.
- Whalers Way: polar / SSO. Bowen: mid-inclination.
- Allied second-hemisphere option — not a Starbase clone (no methalox industrial base yet).

BUILD PHASES

- P1 · 12 mo — Structure demo + range diligence
- P2 · 24 mo — Academy charter (~100 cadets)
- P3 · 5 yr — Print → launch → assemble demo

HARD NO'S

- No Starship MoU. No warp.
- ELA / Arnhem not live.
- SptRIT is not Gilmour.
- Eris not orbital yet (TF2 ~early 2027*).
- Concept art ≠ hardware.

PARTNERS (FACT-CHECKED)

Gilmour (Bowen · Series E A\$217m · ElaraSat rideshare) · Southern Launch (Koonibba re-entry · A\$25m) · Neumann (Transporter cadence) · Titomic + Lab22 · Fleet · EOS · Hypersonix · UNSW / ADFA
